

Section 1: Reading and Writing

Section 1, Module 1: Reading and Writing

27 Questions

Question 1

Although it would be overstating the case to characterize the effects of oil shocks—such as the 57% rise in oil prices from May 1979 to January 1980—as merely _____, Gbadebo Oladosu et al. have shown that the effects of oil shocks on gross domestic product (GDP) can be fairly modest. In India, for instance, recent oil shocks exerted only a slightly negative effect on GDP.

Which choice completes the text with the most logical and precise word or phrase?

- A. nominal
- B. idiosyncratic
- C. derivative
- D. detrimental

Question 2

Accounts known as popular microhistories tell sweeping, century-spanning stories of ordinary objects like coffee and pigments. _____ this approach with that of traditional microhistories, which undertake painstaking historical reconstructions of singular incidents, may seem unlikely, but both are guided by the idea that seemingly inconsequential subjects can reveal larger historical processes in surprising ways.

Which choice completes the text with the most logical and precise word or phrase?

- A. Contrasting
- B. Supplanting
- C. Reconciling
- D. Instituting

Question 3

The following text is adapted from John Mathew's 1925 short story "Tog."

The fog extended its tentacles over city and river, gradually obliterating traces of familiar landscapes. At five thirty the old Panhandle bridge, supported by massive sandstone pillars, stalwart, as when erected fifty years before to serve a generation now passed behind the portals of life, had become a spectral outline against the sky.

As used in the text, what does the word "traces" most nearly mean?

- A. Recollections
- B. Debris
- C. Indications
- D. Copies

Question 4

Sazami (Ripples) is an important work of Nihonga, or classical Japanese painting. Unlike Assi Chia, who adopted traditional European methods such as painting with oil on canvas, Fukuda Heihachiro _____ traditional Japanese approaches. For instance, Fukuda produced *Sazami* by applying color and platinum to a silk surface.

Which choice completes the text with the most logical and precise word or phrase?

- A. adhered to
- B. awarded
- C. reprimanded
- D. refrained from

Question 5

The following text is adapted from J.M. Barrie's 1911 novel *Peter Pan*.

[Children] soon know that they will grow up, and the way Wendy knew was this. One day when she was two years old she was playing in a garden, and she plucked another flower and ran with it to her mother. I suppose she must have looked rather delightful, for Mrs. Darling put her hand to her heart and cried, "Oh, why can't you remain like this for ever!" This was all that passed between them on the subject, but henceforth Wendy knew that she must grow up.

Which choice best describes the overall structure of the text?

- A. It states an assumption about children and then considers the ways in which Wendy differs from others.
- B. It makes a prediction about a future event involving Wendy and then supplies a reason for making that prediction.
- C. It makes a claim about children and then illustrates it with a description of Wendy's experience.
- D. It presents a question about Wendy's qualities and then answers that question in detail.

Question 6

Most bird species that are capable of flight weigh less than a kilogram (kg), which is not surprising considering the burden that extra body weight puts on a flying animal. But not all flying birds are so light, as we can see most clearly in the example of the _____.

Common name	Average mass (kg)	Capable of flight?
Dwarf cassowary	19.7	No
Somali ostrich	41.0	No
Mute swan	11.9	Yes
Andean condor	11.3	Yes

Which choice most effectively uses data from the table to complete the example?

- A. mute swan, which has an average mass of 11.9 kg.
- B. Somali ostrich, which has a higher average mass than the dwarf cassowary.
- C. Somali ostrich, which has an average mass of 90.0 kg.
- D. Andean condor, which has an average mass below 10 kg.

Question 7

On April 12, 1985, the space shuttle Discovery blasted off into space, commencing Mission _____ six days and twenty-three hours, the mission ended when the shuttle landed at Kennedy Space Center in Florida.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A. STS-51-D. Lasting
- B. STS-51-D lasting
- C. STS-51-D, it lasted
- D. STS-51-D, lasting

Question 8

The human face contains the levator palpebrae superioris, a skeletal muscle that is attached to the _____. This muscle plays a role in raising the upper eyelid.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A. sphenoid;
- B. sphenoid,
- C. sphenoid that;
- D. sphenoid

Question 9

The four-minute mile had long seemed an unbreakable barrier in distance running, but after Roger Bannister shattered it in 1954, his achievement was quickly surpassed by others. John Landy lowered the mark to 3:58.0 just six weeks after Bannister's historic 3:59.4 _____. Derek Ibbotson broke Landy's record with a time of 3:57.2 in 1957.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A. run, for instance, while
- B. run, for instance;
- C. run. For instance, while
- D. run; for instance,

Question 10

Paris Opera Ballet dancer Marie Camargo introduced a seemingly simple innovation to the ballet world of the 1730s by removing the heels from her dance shoes, creating the precursor to today's soft ballet slipper. This change was more than an aesthetic choice, _____ redesigned footwear enabled the execution of leaps and other more athletic movements that had been impossible in the traditional heeled ballet shoes.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A. however her
- B. however. Her
- C. however and her
- D. however, her

Question 11

Mary Elizabeth Banning was a self-taught mycologist, or fungi specialist, who researched mushrooms in the late 1800s. Banning documented her findings in *The Fungi of Maryland*, an unpublished manuscript consisting of 175 watercolor _____ a detailed portrait of a particular species, such as *Polyporus betulae*, a fungi species of the order Hymenomycetes presented on plate 118.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A. plates, each
- B. plates, each was
- C. plates; each
- D. plates; each being

Question 12

The crowning of Hugh Capet as *rex Francorum* (king of the Franks) in 987 CE was a pivotal moment in the history of _____. Capet's coronation marked both the end of the Carolingian dynasty and the start of a line of kings that would rule for hundreds of years.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A. France;
- B. France, also
- C. France,
- D. France and

Question 13

To experience both the multi-instrument groove of contemporary blues music and the stripped-down Delta blues of Houston Stackhouse and other blues forebearers _____ the rich history of the genre.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A. is to realize
- B. are realizing
- C. realizing
- D. to realize

Question 14

The Dave Dashaway book series was among the many children's series that were published during the first half of the twentieth century. _____ the Dave Dashaway books were published from 1913 to 1915.

Which choice completes the text with the most logical transition?

- A. To be exact,
- B. Finally,
- C. Nevertheless,
- D. By contrast,

Question 15

Ecologists like Juan Carlos Ruiz-Guajardo use trophic pyramids to illustrate the food chain within a given ecosystem. At a typical pyramid's base are primary producers, like algae, followed by herbivores at the second trophic level, then omnivores and carnivores at the third. _____ the fourth, highest trophic level are apex predators, like dolphins, that feed on the animals below.

Which choice completes the text with the most logical transition?

- A. Lastly,
- B. In fact,
- C. Besides,
- D. For example,

Question 16

In a 2005 study by Sandoval et al., the researchers' aim was to analyze the diet composition of elk and mule deer in New Mexico. _____ they aimed to analyze the ratio of three different plant subtypes within these animals' diet: graminoids, forbs, and browse.

Which choice completes the text with the most logical transition?

- A. Instead,
- B. All the same,
- C. Therefore,
- D. Specifically,

Question 17

Every US state has an associated state soil, which is typically selected by a group of experts, then passed through the state legislature to receive its official designation. For example, Maine's Chesuncook soil was formally designated in 1999, and Delaware's Greenwich soil in 2000. _____ years pass between a soil's selection and official designation, as the legislative process can be notoriously slow.

Which choice completes the text with the most logical transition?

- A. Therefore,
- B. Similarly,
- C. Indeed,
- D. In many cases,

Question 18

Massimo Coli and colleagues used ground-penetrating radar (GPR) to map moisture infiltration within the walls of the Basilica di Santa Croce in Florence, Italy. The contrast between wet and dry materials produces vivid radar echoes that delineate leak pathways, yet the presence of water-saturated zones also hampers the efficacy of the technique. _____ even as GPR makes such areas conspicuous, water within masonry absorbs and scatters radar energy, often obscuring defects in layers beyond the saturated region.

Which choice completes the text with the most logical transition?

- A. Indeed,
- B. Thus,
- C. Likewise,
- D. Nevertheless,

Question 19

In a 1998 study by Smith et al., the researchers used microhistological (fecal) analysis to determine the ratio of three plant subtypes (graminoids, forbs, and browse) within the diets of North American ungulates. The researchers did not perform this analysis on all such ungulates, _____ they focused exclusively on pronghorns and wild horses in New Mexico.

Which choice completes the text with the most logical transition?

- A. regardless;
- B. for instance;
- C. however;
- D. in other words;

Question 20

In 1965, Morrie Turner's comic strip *Wee Pals* became the first serial comic by a Black cartoonist to be syndicated, appearing in papers nationwide. _____ many other strips by Black cartoonists were syndicated, including Barbara Brandon-Croft's *Where I'm Coming From* in 1991 and Jerry Craft's *Mama's Boyz* in 1995.

Which choice completes the text with the most logical transition?

- A. For example,
- B. That is,
- C. Later,
- D. Previously,

Question 21

The ancient Inca built a massive network of roads connecting all parts of their mountain empire. _____ messengers could quickly travel to even the most distant villages in just a few days.

Which choice completes the text with the most logical transition?

- A. Last time,
- B. As a result,
- C. Tomorrow,
- D. Besides,

Question 22

While researching a topic, a student has taken the following notes:

- Dinosaur fossil specimens can be found at science museums all over the world.
- A dinosaur fossil specimen nicknamed Wyrex is housed at the Houston Museum of Natural Science in Houston, Texas.
- Wyrex, a Tyrannosaurus, lived in the Late Cretaceous period.
- A dinosaur fossil specimen nicknamed Pops is housed at the Denver Museum of Nature and Science in Denver, Colorado.
- Pops, a Triceratops, lived in the Late Cretaceous period.

The student wants to emphasize a similarity between the two dinosaur fossil specimens. Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A. Both the Tyrannosaurus fossil specimen Wyrex and the Triceratops fossil specimen Pops lived in the Late Cretaceous period.
- B. While the Tyrannosaurus fossil specimen Wyrex is in Houston, Texas, the Triceratops fossil specimen Pops is in Denver, Colorado.
- C. Dinosaur fossil specimens can be found at science museums all over the world, including in Houston, Texas, and Denver, Colorado.
- D. The Houston Museum of Natural Science is home to Wyrex, a Tyrannosaurus fossil specimen from the Late Cretaceous period.

Question 23

While researching a topic, a student has taken the following notes:

- The World Food Prize is awarded annually for contributions toward improving the world food supply.
- Maria Andrade is a Cape Verdean food scientist who was awarded the prize in 2016.
- Andrade was awarded the prize with three researchers who worked alongside her.
- Andrade's group developed biofortified breeds of sweet potato plants.
- Akinwumi Adesina is a Nigerian economist who was awarded the prize in 2017.
- He spearheaded economic initiatives promoting African agricultural infrastructure.

The student wants to emphasize a similarity between Andrade and Adesina. Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A. Andrade won the World Food Prize in 2016 for her work with biofortified sweet potato plants, as did Adesina, a Nigerian economist.
- B. Andrade, a food scientist and World Food Prize winner, has made scientific advancements with sweet potato plants, while Adesina, an economist, has promoted African agricultural infrastructure.
- C. Though one is a food scientist and the other an economist, Andrade and Adesina have both been recognized with World Food Prizes for contributions toward improving the world food supply.
- D. A Cape Verdean food scientist, Andrade won the World Food Prize in 2016; in 2017, however, the annual prize was awarded to a Nigerian economist—Adesina.

Question 24

While researching a topic, a student has taken the following notes:

- Louis Ballard was a classical composer and citizen of the Quapaw Tribe.
- His compositions synthesize Western classical music with elements of various Native musical traditions.
- Ballard's classical piece *Kateri Dances* features traditional Hopi songs.
- Ballard's classical piece *Cacega Ayuwipi* incorporates an Inuit hand drum, a traditional Native instrument.

The student wants to emphasize a similarity between the two classical compositions. Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A. Ballard's compositions synthesize Western classical music with elements of various Native musical traditions, such as traditional Hopi songs.
- B. Ballard's *Kateri Dances* features traditional Hopi songs, and *Cacega Ayuwipi* incorporates an Inuit hand drum, as both synthesize Western classical music with elements of Native musical traditions.
- C. Ballard's works synthesize Western classical music and elements of various Native musical traditions; for example, the classical piece *Kateri Dances* features traditional Hopi songs.
- D. Ballard's composition *Kateri Dances* features traditional Hopi songs, while *Cacega Ayuwipi* incorporates an Inuit hand drum.

Question 25

While researching a topic, a student has taken the following notes:

- Lighthouses send out crucial light signals to help ships and other watercraft navigate at night.
- Before automation, lighthouses were run by lighthouse keepers.
- Elizabeth Smith was the lighthouse keeper at Old Field Point Light in New York.
- She held this position from 1830 to 1856.
- Thelma Austin was the lighthouse keeper at Point Fermin Light in California.
- She held this position from 1925 to 1941.

The student wants to emphasize a difference between the two lighthouse keepers. Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A. As the lighthouse keeper at Point Fermin Light, Thelma Austin helped watercraft navigate at night.
- B. Elizabeth Smith worked as a lighthouse keeper in an earlier century than did Thelma Austin.
- C. Elizabeth Smith and Thelma Austin both played crucial roles in ensuring safe navigation for watercraft in past centuries.
- D. From 1830 to 1856, the nighttime waters of New York were made more navigable thanks to Elizabeth Smith.

Question 26

Notes:

- The Highpointers Club is a hiking club.
- One of the main goals among club members is to reach the highest points in all fifty US states.
- Those who achieve this are called 50 Completes.
- In Suh Han became a 50 Complete on November 15, 2013.
- The highest point in Pennsylvania is Mount Davis, at 3,213 ft.
- The highest point in New Mexico is Wheeler Peak, at 13,167 ft.

Which choice most effectively uses information from the given sentences to explain the 50 Completes hiking challenge to a new audience?

- A. If you are looking for a new hiking challenge, consider joining the Highpointers Club, as In Suh Han, a hiker who successfully reached the highest point in every US state.
- B. On November 15, 2013, In Suh Han finally completed the feat of reaching the highest point in all fifty US states, including Mount Davis in Pennsylvania and Wheeler Peak in New Mexico.
- C. Not until after you have reached the highest points in all fifty US states—including Mount Davis in Pennsylvania and Wheeler Peak in New Mexico—can you include yourself among the 50 Completes of the Highpointers Club.
- D. Hikers aiming to count themselves among the 50 Completes must reach not only Pennsylvania's Mount Davis but also the even higher peak of Wheeler Peak in New Mexico.

Question 27

Notes:

- Since 1931, the New York Times (NYT) Best Sellers list has been a measure of the most successful books in the US.
- Margot Lee and Tayari Jones are Black authors who have reached the NYT Best Sellers list.
- *Hidden Figures* is a nonfiction book by Margot Lee.
- It reached the NYT Best Sellers list on January 29, 2017.
- *An American Marriage* is a novel by Tayari Jones.
- It reached the NYT Best Sellers list on February 6, 2018.

Which choice most effectively uses information from the given sentences to emphasize the different years in which the books reached the NYT Best Sellers list?

- A. Margot Lee and Tayari Jones are both NYT best-selling authors.
- B. The nonfiction book *Hidden Figures* became an NYT best seller in 2017; *An American Marriage*, a novel, joined this list as well, but in 2018.
- C. *Hidden Figures* and *An American Marriage* are both books by Black authors that have reached the NYT Best Sellers list.
- D. Margot Lee's *Hidden Figures* and Tayari Jones's *An American Marriage* are both NYT best sellers, but the former is a nonfiction book, whereas the latter is a novel.

Section 1, Module 2: Reading and Writing

27 Questions

Question 1

Despite the marked divergence of such ballads as "The House Carpenter" from their antecedents in Britain, the balladry of the Appalachian South long figured as a proxy for the music naturalized there in the colonial era. More recent scholarship offers a more _____ directly acknowledging Appalachian innovations to British ballads as well as the influence of spirituals sung in Black churches in the South.

Which choice completes the text with the most logical and precise word or phrase?

- A. recapitulation
- B. corollary
- C. corrective
- D. hypothesis

Question 2

Though research indicating that plants may preferentially absorb copper and other essential elements (i.e., those necessary for plant growth) from soil over nonessential ones seems to suggest that copper-contaminated soil may be especially _____ to decontamination by plants, Milena Mohri and team found that plants tended to accumulate the nonessential element cadmium at higher rates than copper; the presence of cadmium in such soils should thus be assessed before pursuing plant-based copper decontamination.

Which choice completes the text with the most logical and precise word or phrase?

- A. pertinent
- B. detrimental
- C. unresponsive
- D. amenable

Question 3

The Pacific halibut is an ectothermic (cold-blooded) fish, whereas the Albacore tuna is a regional endotherm; unlike that of ectotherms, its body temperature remains above the ambient water temperature. The basking shark had been classified as a full endotherm, but researchers Haley R. Dolton et al. found that its body temperature remains 1.0 to 1.5°C above ambient, which is _____ that classification.

Which choice completes the text with the most logical and precise word or phrase?

- A. indicative of
- B. subordinate to
- C. opportune for
- D. incongruous with

Question 4

In 2005, Swedish researchers studying flawed choice recall devised an experiment in which participants were shown two photos of different faces and asked to select the one they found more attractive. The researchers appeared to give the participants the photo they had chosen, but in fact used sleight of hand to give them the photo of the person they had not chosen. Most participants accepted the swap and, when asked to explain their initial preference, gave justifications for having chosen the face in the photo they were given. Subsequent researchers have replicated this finding with other choices, including jam preferences.

Based on the text, why was the sleight-of-hand step an important part of the experiment?

- A. It allowed the researchers to control for the possibility that some participants found the two faces roughly equally attractive.
- B. It enabled the researchers to determine whether the thought processes involved in selecting which photo had the more attractive face was similar to the thought processes involved in selecting a preferred jam.
- C. It helped the researchers test whether participants would embrace an outcome they thought was consistent with their own choices even when it was truly contradictory.
- D. It allowed the researchers to measure the willingness of participants to change their positions when presented with persuasive counterarguments.

Question 5

Text 1

Isaac Asimov, author of *Nemesis* and *The End of Eternity*, is highly regarded despite his mediocre writing style. His prose is workmanlike; his characters are flat and discuss ideas rather than emotions. That his work is enjoyable despite this is a testament to his prodigious imagination—even if people read his books only for the ideas, they will have plenty to consider.

Text 2

Asimov is critiqued for his style, but it is wrong to fault a writer for failing to do what he never intended to do. For example, although most of his novel *Foundation* consists of people discussing science and politics and we find out little about his characters' lives, Asimov wanted to convey the vast sweep of human history over centuries, and one of his points is that at such a timescale, individuals don't matter. Thus his lack of characterization is central to Asimov's thematic aims.

Based on the texts, how would the author of Text 2 most likely respond to the evaluation of Asimov's writing style in the underlined claim in Text 1?

- A. By arguing that Asimov's writing style should be judged against the styles of historians rather than those of fiction writers
- B. By pointing out that the flatness of Asimov's characters is a feature of *Nemesis* and *The End of Eternity* but not of *Foundation*
- C. By agreeing that Asimov's prose is flawed but disagreeing about the quality of his characters
- D. By asserting that Asimov's minimal characterization is likely a conscious choice that helps him convey an important idea

Question 6

The following text is adapted from Lady Gregory's 1904 play *Spreading the News*. Jack Smith and Bartley Fallon have encountered each other at the local fair.

JACK: It isn't to the fair I came myself, but up to the Five Acre Meadow I'm going, where I have a contract for the hay. We'll get a share of it into tramps [drying stacks] to-day.

BARTLEY: You will not get it into tramps to-day. The rain will be down on it by evening, and on myself too. It's seldom I ever started on a journey but the rain would come down on me before I'd find any place of shelter.

JACK: If it didn't itself, Bartley, it is my belief you would carry a leaky pail on your head in place of a hat, that way you'd not be without some cause of complaining.

Based on the text, what does Jack most likely believe about Bartley?

- A. Bartley and Jack will be better able to cut the hay if they work together.
- B. Bartley will find fault with any situation.
- C. Bartley is a poor judge of the weather.
- D. Bartley is concerned that Jack hasn't prepared for the weather.

Question 7

In 1967, archaeologist James Mellaart claimed that at its peak, Çatalhöyük—a 33-acre Neolithic village in present-day Turkey that dates from approximately 7100 to 5950 BCE—housed between 8,000 to 10,000 residents, an estimate based on the excavation of dense clusters of mud brick buildings that were thought to have been dwellings. Arguing that such estimates should be reevaluated, Ian Kuijt and Arkadiusz Marciniak (2024) cite radiocarbon data and ethnographic modeling that suggest the heterogeneity of building use in Çatalhöyük, with many individual buildings being inhabited for relatively brief periods—20 to 30 years or less—before being abandoned or repurposed for nonresidential functions (e.g., storage). Accordingly, these recent findings challenge the assumption that _____.

Which choice most logically completes the text?

- A. the buildings excavated at Çatalhöyük at the time of Mellaart's research had served a residential purpose as early as 7100 BCE.
- B. the density of excavated buildings at Çatalhöyük can serve as a proxy for how many people inhabited the village at a given time.
- C. the use of mud bricks is a reliable indicator that a structure had been used either as a dwelling or for nonresidential purposes.
- D. the number of buildings at Çatalhöyük would have been sufficient to accommodate a population that expanded from 8,000 to 10,000 inhabitants by 5950 BCE.

Question 8

Chondrite meteorites recovered on Earth tend to show negligible concentrations of sodium-rich evaporites. Following collection in space and return to Earth in controlled nitrogen environments with extremely low (1%) humidity, material from the asteroid Bennu—which shares compositional features with a chondrite subclass—was found to have significant sodium evaporite concentrations. After five months in Earth air at 30%-40% humidity (lower-than-average humidity for most nondesert Earth locations), a small sample of Bennu material showed significant evaporite deterioration and new compound formation; after eight months in similar conditions, another sample experienced complete loss of sodium evaporites. Together, these observations suggest that _____.

Which choice most logically completes the text?

- A. sodium-rich evaporites are scarce on recovered chondrites in part due to the length of time those chondrites have been exposed to much lower humidity levels than those typically found on Earth.
- B. the sodium evaporite concentrations on Bennu may have once been similar to those on recovered chondrites, but exposure to Earth's atmospheric humidity affected Bennu's evaporites and led to new compound formation.
- C. the nitrogen storage environment in which the Bennu material was transported may have facilitated the formation of sodium-rich evaporites that then deteriorated when exposed to atmospheric humidity typical of most nondesert locations on Earth.
- D. the discrepancy between sodium evaporite concentrations on recovered chondrites and those initially observed on the Bennu material may be attributable to the chondrites' exposure to atmospheric humidity typical of many Earth environments.

Question 9

Humans are overwhelmingly right-hand dominant (85–90%) and can thus be said to exhibit strong population-level right-handedness (PLRH). Among studies of nonhuman primates, William C. McGrew's 1988 study of captive gorillas purported to show PLRH, while William C. McGrew and colleagues' 1999 study of wild chimpanzees did not. Overall, the studies claiming PLRH in nonhuman primates find much lower incidences of right-handedness than humans exhibit, but it's worth noting that studies of captive primates tend to show significantly greater incidences of right-handedness than studies of wild primates do, therefore raising the possibility that _____.

Which choice most logically completes the text?

- A. the apparent discrepancy between the studies' results may be partly attributable to the 1988 study using different criteria when assessing hand dominance than were used in the 1999 study.
- B. the greater exposure to humans among the captive gorillas induced them to acquire more right-handed behaviors.
- C. the number of individuals in the study of wild chimpanzees is insufficient to preclude the claim that nonhuman primates exhibit PLRH.
- D. the number of individuals in the study of captive gorillas is insufficient for a robust claim regarding evidence of PLRH.

Question 10

Louis-Ferdinand Céline's 1932 novel *Journey to the End of the Night* is regularly described as autobiographical. That characterization is apt—there are many parallels between the experiences of the novel's protagonist, Ferdinand Bardamu, and those of Céline—but it should not be taken to mean that every person or event depicted in *Journey to the End of the Night* has a real-life analogue. Much of the novel is pure invention, and readers who neglect this fact and instead focus excessively on correspondences between the novel and Céline's life can thus _____.

Which choice most logically completes the text?

- A. overemphasize the extent to which Céline took inspiration from earlier writers.
- B. fail to appreciate how much creativity Céline shows in the book.
- C. refuse to acknowledge that Céline drew on real-world material when writing *Journey to the End of the Night*.
- D. misrepresent *Journey to the End of the Night* as being more widely read than it actually is.

Question 11

Narratives of American revolutionary history often imply that the US Declaration of Independence (published in 1776) was a document that specifically resulted from the presumably exceptional nature of the soon-to-be United States—in this interpretation, the Declaration is a singular instrument born from a response to injustice that was intended to announce the birth of a new kind of nation and win foreign allies to that nation's cause. But this interpretation neglects to place the Declaration in the larger context of eighteenth-century Western political philosophy—the Declaration was only one of several significant works published during 1776, a remarkable year for political thought.

Which statement, if true, would most strongly support the claim in the underlined portion?

- A. Newspapers in 1776 were often read aloud in public places, ensuring that even those who did not read newspapers themselves could still knowledgeably participate in political discussions.
- B. In late 1776, Benjamin Franklin traveled to France to seek French support for the American cause, eventually leading to France providing both military and financial aid to the Americans.
- C. George Campbell's *The Philosophy of Rhetoric*, a highly influential attempt to develop a foundational theory of how humans communicate, was published in 1776.
- D. In 1776, the English historian Edward Gibbon began publishing *The History of the Decline and Fall of the Roman Empire*, a work whose novel theories of empire collapse proved politically influential.

Question 12

Economic Indicators of Goat Farms in France by Feeding System in 2018

Feeding system	Milk per goat/year (kg)	Milk revenue (€)	Feeding cost (€)	Gross margin (€)
Grazing	705	480.8	152.9	364
Grass silage	830	566.1	179.3	427
Fresh forage	860	617.5	248.5	364
Corn silage	931	653.6	220.6	456

Gross margin refers to the profit after subtracting certain costs (e.g., feeding cost) from total revenue, which may include more than milk revenue.

While the Netherlands, Turkey, and France are established leaders in the global goat dairy industry, countries like Belgium and Malaysia have smaller but growing goat dairy sectors. Seeking the feeding system that will give her the greatest profit, a Belgian farmer consults research published in 2018 by the Institut de l'Élevage (French Livestock Institute) comparing the economic indicators of different feeding systems on French goat farms.

Which consideration, if true, should make the farmer most hesitant to rely on what the table suggests is the most profitable feeding system?

- A. The labor costs of grazing livestock in Belgium (e.g., herding, fencing, and moving) are likely comparable with those in France; however, farmland in Belgium that is suitable for grazing is scarcer and may be more expensive than in rural southern and central France, where many French goat farms are located.
- B. If properly processed and stored under airtight conditions, corn silage can retain its quality for over a year; hence, feeding systems that use corn silage are assured of a consistent feed supply that is less vulnerable to weather conditions than are more traditional feeding systems, such as grazing.
- C. Goats expend energy grazing and therefore tend to produce less milk than goats fed silage or fresh-cut grass; moreover, grazing goats' diets are heterogeneous and seasonally variable, so milk production could decline when the nutritional value of available vegetation is poor.

D. Corn silage is typically mixed with soybean meal; hence, the feeding cost associated with corn silage is likely to fluctuate with the global price of soybeans, a commodity that has historically been subject to significant year-over-year price volatility.

Question 13

While not everyone notices it, beneath the tree canopy of an ordinary city park lies an extraordinary web of life—fungus breaking down fallen leaves, native bees pollinating wildflowers, and moss growing in the crevices of an old log. To document this hidden biodiversity, everyday people have been participating in “bioblitz” events, in which participants photograph, collect, and identify species using both field guides and mobile apps. These collective observations reveal which plant and animal species depend on one another for survival—ecological relationships that might otherwise remain unseen.

In context, the text’s characterization of the biodiversity in city parks as “hidden” most clearly conveys which idea?

- A. The environmental interactions in city parks are abundant but occur primarily during nighttime hours when human visitors are absent.
- B. Some wildlife species that populate city parks have developed sophisticated camouflage techniques that minimize their visibility.
- C. The ecological relationships in city parks may not be readily apparent without systematic observation and documentation efforts.
- D. There are many beautiful parks in cities, but they often remain unseen because of poor urban planning decisions.

Question 14

Claudine at School is a 1900 novel by Colette, originally written in French. The narrator is a fifteen-year-old girl living in a small, rural town. She presents herself as having a strong emotional attachment to the surrounding forests: _____.

Which quotation from a translation of *Claudine at School* most effectively illustrates the claim?

- A. "Green meadows make rifts in [the woods] here and there, so do little patches of cultivation. But these do not amount to much, for the magnificent woods devour everything. As a result, this lovely region is astoundingly poor and its few scattered farms provide just the requisite number of red roofs to set off the velvety green of the woods."
- B. "And then there are my favourites, the great woods that are sixteen and twenty years old. It makes my heart bleed to see one of those cut down."
- C. "Under the firs, you light a fire, even in summer, because it's forbidden; you cook any old thing, an apple, a pea, a potato stolen from a field, some wheaten bread if you've nothing better."
- D. "My name is Claudine, I live in Montigny; I was born there in 1884; I shall probably not die there."

Question 15

Text 1

In parts of New Zealand, the stoat is a major predator of the house mouse. Researcher G.L. Blackwell and colleagues found that when this predation pressure on house mice was temporarily reduced, their numbers significantly increased. This finding illustrates a foundational ecological principle: predators control prey population numbers.

Text 2

François Potvin and colleagues found that excluding wolves from a site in Quebec, Canada, where they typically prey on white-tailed deer had no significant effect on white-tailed deer abundance. Many other predation-reduction studies show an increase in prey abundance, but those studies often focus on small, rapidly reproducing prey, like birds, mice, and frogs, rather than large, slowly reproducing prey, like white-tailed deer, which could account for the difference between these results and Potvin and colleagues' results.

Based on the texts, the author of Text 2 would most likely agree with which statement about the “principle” mentioned in Text 1?

- A. It has been challenged by some studies, but the findings of those studies have not been widely accepted.
- B. It is plausible, but many of the studies that support it have methodological flaws.
- C. It has some evidential support, but it should not be regarded as universally applicable.
- D. It may be true for some predators but only because those predators share certain physical characteristics.

Question 16

O'Donoghue et al. (2021) analyzed temperature data of Jupiter's upper atmosphere observed in 2016 and 2017. When superimposed on a map of Jupiter, time-lapse data representing several hours of observations from one day in 2016 and one day in 2017 indicate an overall temperature gradient from the poles to the equator, with highest temperatures occurring at the poles, which undergo auroral heating. But the 2017 data exhibit a large oval of unusually elevated temperature separated from the aurora at one pole by a band of cooler atmosphere. No other known heating mechanism on Jupiter could account for the formation of this anomalous structure, so one hypothesis considered was that it was ejected from the auroral region toward the equator.

Which finding about Jupiter's upper atmosphere, if true, would most strongly support the hypothesis as described in the text?

- A. Comparing the data observed in 2016 with those observed in 2017 suggests that the anomalous oval of elevated temperature began forming in 2016.
- B. According to the data, auroral temperatures in 2016 were higher than those in 2017, although in both years the highest observed temperatures were harbored in auroral zones.
- C. The 2017 data viewed in time-lapse appear to show the oval of elevated temperature drifting slightly away from the area of auroral heating over a period of several hours.
- D. The 2017 data viewed in time-lapse show greater disparities between polar and equatorial temperatures at the beginning of the observation period than at the end of the period observed.

Question 17

Australia's modern population of dingoes, an ancient lineage of canids, comprises two genetically distinct groups that inhabit different sides of the country (west and east). Many have attributed this divergence to the nearly 3,500-mile-long "dingo fence," a barrier installed to prevent access to livestock, that created a division of Australia into large southeast and northwest sections around 150 years ago. However, having analyzed DNA from ancient dingo specimens ranging from hundreds to thousands of years old, paleogeneticist Sally Wasef and colleagues reject that common explanation.

Which finding, if true, would most directly explain why Wasef and colleagues reject the common explanation presented in the text?

- A. The continent-wide population structure of modern dingoes matches that of the dingoes that were present in Australia around 2,000 years ago.
- B. Ancient dingoes quickly dispersed throughout Australia after being introduced in two independent waves from distinct source populations at least 3,000 years ago.
- C. The two earliest known sets of skeletal dingo remains in Australia date to around 3,400 years ago at a site in the west and around 3,300 years ago at a site in the east.
- D. New Guinea singing dogs, a closely related species, began interbreeding with dingoes in southeast Australia 2,200–2,600 years ago and with dingoes in northwest Australia in the same period.

Question 18

A film studies student is researching early 20th-century film serials, which consisted of individual episodes of a single long story that were shown weekly in theaters. *The Shadow of the Eagle* is a 1932 serial that, over its 12 episodes, kept its audience interested with the suspense and drama that are typical of the crime genre. The student, however, claims that ultimately audiences of the time preferred resolution and closure over ongoing tension.

Which finding, if true, would most directly support the student's claim?

- A. Audiences of the time considered *The Shadow of the Eagle* to belong to a genre other than the crime genre.
- B. The 12th episode of *The Shadow of the Eagle* was the most expensive episode of the series to produce.
- C. Modern critics generally regard the first episode as the best installment of *The Shadow of the Eagle*.
- D. The 12th episode of *The Shadow of the Eagle* was viewed by more people than was any previous episode in the series.

Question 19

Psychologist Lisa K. and colleagues presented participants with several series of images of an everyday object, progressing from blurry to clear, and asked participants to identify the object as soon as they confidently could (on average, at image 12 of 15). Participants were then asked to return to each series and recall at which point they were able to identify the image; on average, they selected image 10. This phenomenon—believing that one knew more in the past than one actually did—is known as hindsight bias. When participants were asked to estimate when a person who had not participated in the experiment would be able to identify the object, the average selection was again image 10. This finding suggests that _____.

Which choice most logically completes the text?

- A. people tend to believe that they are less likely than their peers are to show hindsight bias.
- B. being implicitly reminded of their earlier state of ignorance may enable people to reduce their hindsight bias.
- C. a form of hindsight bias may occur even when it does not directly enable people to exaggerate their own past knowledge.
- D. having their own hindsight bias explicitly pointed out to them may not prevent people from applying that same bias to their peers.

Question 20

The *Lex Licinia sumptuaria* of 103 BCE was one in a succession of ancient Roman sumptuary laws governing expenditures on luxury, primarily regulating ceremonial processions and other lavish events. Such laws, enacted against a backdrop of anxiety about social dynamism, were intended to limit aspirational overreaching for status but were infrequently enforced. Moreover, enforcement was generally limited to fines, which, when levied against high-profile offenders, were widely announced. The affluent accepted fines as a tax on privilege, even as the amounts increased with frequent revisions to the laws. Historians have therefore argued that enforcing sumptuary laws only minimally may have been a way to avoid undermining the laws' aims, given that _____.

Which choice most logically completes the text?

- A. the public announcement of fines could signal offenders' wealth and status, placing enforcement of the laws in conflict with their intent.
- B. the few fines that were imposed under the laws were tolerable to wealthy offenders and thus did not help the laws serve their intended purpose.
- C. authorities focused enforcement on the wealthiest offenders, recognizing that pursuing offenders who were unable to pay the fines could weaken fines' effectiveness as a deterrent.
- D. less-affluent citizens were reluctant to risk incurring a fine and thus voluntarily complied with the laws even in the absence of regular enforcement.

Question 21

In 2014, Marianne Dehasque et al. challenged earlier theories on causes of woolly mammoth extinction that emphasized isolation and inbreeding and a resulting increase in genetic variation and increase in chances of harmful genetic mutations. Focusing on Wrangel Island off the coast of Siberia, where the last mammoths lived, the team used genome-based simulations to evaluate mutations in the population there. The analysis showed that particularly damaging mutations became less frequent, while moderate ones accumulated over time within the isolated population, which quickly grew from about 8 founding individuals to the 200–300 individuals it maintained until its extinction. The team thus concluded that despite its isolation, the Wrangel Island mammoth population likely _____.

Which choice most logically completes the text?

- A. developed increasing resistance to certain diseases and environmental harms over time.
- B. didn't succumb as a result of the most harmful genetic mutations becoming too prevalent for the population to be sustained.
- C. didn't go extinct suddenly but rather experienced a slow decline over its last several generations.
- D. reached a size similar to that of nearby mammoth populations that were not isolated and thus had fewer genetic mutations.

Question 22

In environments ranging from shallow tidal areas to the deep ocean, single-celled marine foraminifera have been found to contain phosphate at concentrations many times greater than those in the surrounding water. Notably, though, species from oxygen-rich environments like the Mid-Atlantic Ridge show lower phosphate concentrations than species from oxygen-poor areas. Scientists have thus suggested that especially high internal phosphate concentrations enable foraminifera to offset the effects of low oxygen.

Which choice best states the main idea of the text?

- A. There is a correlation between habitat depth and phosphate concentration in marine foraminifera, with deeper-dwelling species generally maintaining higher internal concentrations.
- B. While marine foraminifera in general have high phosphate concentrations, those concentrations tend to vary by species' habitat, possibly reflecting adaptations to different levels of oxygen.
- C. Marine foraminifera maintain similar phosphate concentrations across different ocean environments, suggesting that while this trait plays a role in offsetting low oxygen levels, that is not its only function.
- D. Marine foraminifera counterbalance the effects of reduced oxygen levels by storing phosphate at high concentrations, matching or in some cases even slightly exceeding the phosphate concentration in the surrounding seawater.

Question 23

Sandy River in Oregon hosts one of a growing number of restoration projects that target the hyporheic zone (HZ), a subsurface region where groundwater and surface water mix, creating a richly biodiverse habitat. While rebuilding an HZ's physical structure (e.g., with gravel) might be feasible, is it possible to restore its biological community? To explore this question, scientists seeded restored HZs in Oregon's Johnson Creek with stoneflies and other locally extirpated species. Although the restored areas were colonized quickly, it was mostly by species from the unrestored sections of the creek rather than by the reintroduced species.

Which choice best states the main purpose of the text?

- A. To trace difficulties in implementing a plan to a flawed understanding of a concept
- B. To describe a trend while suggesting that it may prove to have negative consequences
- C. To expose a contradiction underlying a particular methodology
- D. To introduce an approach while acknowledging that it wasn't fully successful

Question 24

In 2016, the city of Jakarta—one of the world’s largest metropolitan areas—revoked a rule that restricted the use of major roads in the city’s business district to only vehicles with three or more passengers during rush hours (7:00–10:00 a.m. and 4:30–7:00 p.m.). As researchers had expected, this move led to increased traffic delays during those times on the roads whose use had been limited, especially in the later rush hour period. Surprisingly, delays also worsened during other periods of time and on roads that hadn’t been subject to the rule; the data most clearly reflect this effect in the period of _____.

Graph:

Change in Average Traffic Delay After End of Restriction

Legend:

light gray = previously restricted; black = previously unrestricted

Which choice most effectively uses data from the graph to complete the statement?

- A. 10:00 a.m.–4:30 p.m. for previously unrestricted roads.
- B. 7:00–10:00 a.m. for both types of roads.
- C. 7:00–8:00 p.m. for both types of roads.
- D. 4:30–7:30 p.m. for previously restricted roads.

Question 25

Walter De Maria's *Earth Room* installations in Germany and New York are notable examples of interior earth _____ former appearing in Munich and Darmstadt as temporary exhibits during the 1970s and the latter becoming a permanent fixture in Manhattan in the 1980s. The New York Earth Room consists of 280,000 pounds of soil spread across 3,600 square feet of gallery space.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A. sculpture. The
- B. sculpture the
- C. sculpture, as the
- D. sculpture, the

Question 26

Topographical prominence is a measure of a mountain's independence from other mountains. Having 13,199 feet of prominence, _____.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A. geographers have ranked Mount Rainier, a peak in the United States, as the world's 21st most prominent mountain.
- B. the list of mountains geographers rank as the world's most prominent includes Mount Rainier, a peak located in the United States, at number 21.
- C. Mount Rainier, a peak located in the United States, is ranked by geographers as the world's 21st most prominent mountain.
- D. the ranking given by geographers to Mount Rainier, a peak located in the United States, is 21st most prominent mountain in the world.

Question 27

Publisher Mary Katharine Goddard (1738–1816) played a crucial role in the United States' fight for independence. Her newspaper, the *Maryland Journal*, emerged as a powerful voice for the patriot cause in the 1770s, advocating against British rule and _____ revolutionary ideals.

Which choice completes the text so that it conforms to the conventions of Standard English?

- A. had popularized
- B. popularizes
- C. would popularize
- D. popularizing

Section 2: Math

Section 2, Module 1: Math

1 SAT Math

If $5 - 3x = 48$, what is the value of $(1/6)(5 - 3x)$?

- A. 48
- B. 6
- C. 8
- D. 288

2 SAT Math

The measures of the interior angles of triangle ABC are 34° , 68° , and x° . What is the value of x ?

- A. 34
- B. 78
- C. 102
- D. 180

3 SAT Math

The function f is defined by $f(x) = 3x - 8$. What is the value of $f(9)$?

- A. 27
- B. -72
- C. 35
- D. 19

4 SAT Math

A certain great white shark can swim at a maximum speed of 15 meters per second. At this maximum speed, how many meters would this great white shark swim in 10 seconds?

5 SAT Math

A right square pyramid has a base edge length of 3 centimeters and a height of 12 centimeters. What is the volume, in cubic centimeters, of the pyramid?

- A. 36
- B. 24
- C. 12
- D. 108

6 SAT Math

The distance d , in feet, from the ground to a flag on a flagpole t seconds after a person begins lowering it is given by the function $d(t) = 19 - 2t$. In this context, what does 19 represent?

- A. The time, in seconds, it takes for the flag to be fully lowered
- B. The distance, in feet, of the flag from the ground before it is lowered
- C. The rate, in feet per second, at which the flag moves as it is lowered
- D. The distance, in feet, of the flag from the ground 2 seconds after it begins lowering

7**SAT Math**

An equation of the graph shown is $y = (1/4)(x - p)^2 + 4$, where p is an integer constant. What is the value of p ?

**8****SAT Math**

The function f is defined by $f(x) = \frac{7}{(15)x}$. What is the slope of the graph of $y = f(x)$ in the xy -plane?

- A. 0
- B. $\frac{7}{(15)}$
- C. $\frac{(15)}{(7)}$
- D. The slope is undefined.

9 SAT Math

The price of an item increased by $p\%$ from \$18 to \$21. What is the value of p ?

10 SAT Math

Maya bought stickers and granola bars for \$145. Each package of stickers cost \$3, and each granola bar cost \$1. If Maya bought 25 packages of stickers, how many granola bars did she buy?

- A. 145
- B. 75
- C. 70
- D. 120

11 SAT Math

Points A and B lie on a circle with center C. The length of segment AC is 86 millimeters. What is the length, in millimeters, of segment BC?

- A. 172
- B. 43
- C. 86
- D. 344

12 SAT Math

$$(p + 7) + 6 = 11$$

What value of p is the solution to the given equation?

- A. 13
- B. -2
- C. 24
- D. 5

13 SAT Math

How many solutions does the equation $7x + 3x + 12 = 10x + 5 + 7$ have?

- A. Zero
- B. Infinitely many
- C. Exactly one
- D. Exactly two

14 SAT Math

A right square prism has a height of 5 units. The volume of the prism is 405 cubic units. What is the length, in units, of an edge of the base?

15 SAT Math

During the month of January, an airport parking garage is offering a special price plan. According to this plan, the cost of parking in the garage for up to 5 days is \$24 for the first day and \$12 for each additional day. Which of the following equations gives the cost C , in dollars, of parking in the garage for t days, where t is a positive integer and $t \leq 5$?

A. $C = 24t - 12$

B. $C = 24t + 12$

C. $C = 12t + 12$

D. $C = 12t + 24$

16 SAT Math

The graph of the function f , where $y = f(x)$, gives the total cost y , in dollars, for a certain video game system and x games. What is the best interpretation of the slope of the graph in this context?

- A. The video game system costs \$24.
- B. The video game system costs \$100.
- C. Each game costs \$100.
- D. Each game costs \$24.

17 SAT Math

For $x = 0$, y has a value of 190. The value of y increases by 20% for every increase of 1 in the value of x . Which equation represents this situation?

- A. $y = 190x^{1.20}$
- B. $y = 190(0.20)^x$
- C. $y = 190(1.20)^x$
- D. $y = 190(20)^x$

18 SAT Math

$(5x + 10)(2x + 1) - (3x - 18)$ For all values of x , the given expression is equivalent to which of the following? I. $10x^2 + 22x + 28$ II. $10x^2 + 25x + 10 - 3x + 18$

- A. I only
- B. II only
- C. I and II
- D. Neither I nor II

shown.

The scatterplot shows the relationship between two variables, x and y . A line of best fit for the data is also shown. At $x = 5$, how many units greater is the y -value predicted by the line of best fit than the actual y -value of the data point?

- A. 2
- B. 4
- C. 6
- D. 10

20 SAT Math

In the xy -plane, the graph of $y = 1/x$ is shifted up 24 units. Which of the following is an equation of the resulting graph?

A. $y = \frac{1}{x + 24}$

B. $y = \frac{1}{x} - 24$

C. $y = \frac{1}{x - 24}$

D. $y = \frac{1}{x} + 24$

21 SAT Math

The function h is defined by $h(x) = 8/(2x + 3)$. What is the value of $h(4)$?

22 SAT Math

The function g is defined by $g(x) = -x/4 + 11$. What is the x -intercept of the graph of $y = g(x) + 5$ in the xy -plane?

A. $(44, 0)$

B. $(-64, 0)$

C. $(64, 0)$

D. $(-44, 0)$

Section 2, Module 2: Math

1 SAT Math

$3x + 5y = 34$ $8x + 10y = 44$ The solution to the given system of equations is (x, y) . What is the value of $5y$?

- A. 78
- B. 3
- C. 2
- D. 70

2 SAT Math

An equation of the line in the xy -plane that contains the points $(0, 6)$ and $(3, 0)$ is $ax + by = 1$, where a and b are constants. What is the value of a ?

3 SAT Math

What is the x -intercept of the graph of $y = (28 - x)/(ax + b)$ in the xy -plane, where a and b are positive constants?

- A. $(28, 0)$
- B. $(-(b)/(a), 0)$
- C. $(0, -28)$
- D. $(0, (28)/(b))$

The scatterplot shows the relationship between two variables, x and y . Which of the following equations best represents the relationship shown?

A. $y = -x + 15.4$

B. $y = x - 15.4$

C. $y = -x + 1.7$

D. $y = x - 1.7$

5 SAT Math

0.0028 is 0.7% of a and 154 is 550% of b , where a and b are positive numbers. What percentage of a is b ?

- A. 70%
- B. 112%
- C. 1,120%
- D. 7,000%

6 SAT Math

x	$g(x)$
-20	2
-10	-3
1	8

The table shows three values of x and their corresponding values of $g(x)$, where $g(x) = \frac{f(x)}{(x + 6)}$ and f is a linear function. What is the y -coordinate of the y -intercept of the graph of $y = f(x)$ in the xy -plane?

7 SAT Math

Which expression is equivalent to $(x^2 - 10x + 21)/((x - 7)(x + 7))$, where $x > 7$?

- A. $(x - 7)/(x + 7)$
- B. $(x + 3)/(x + 7)$
- C. $(x - 3)/(x + 7)$
- D. $(x - 3)/(x - 7)$

8 SAT Math

An object's speed is increasing at a rate of 6.4 meters per second squared. What is this rate, in miles per minute squared, rounded to the nearest tenth? Use 1 mile = 1,609 meters.

- A. 251.4
- B. 14.3
- C. 0.2
- D. 171.6

9 SAT Math

$60x^2 + 60x = -10$ One solution to the given equation can be written as $x = \frac{-6 - k\sqrt{3}}{12}$, where k is a constant. What is the value of k ?

- A. 2
- B. 12
- C. 24
- D. 60

10 SAT Math

Line j in the xy -plane passes through the points $(9, 0)$ and $(0, 6)$. Line k passes through the origin and is perpendicular to line j . What is the x -coordinate of the point where lines j and k intersect?

11 SAT Math

$$f(x) = 12x^{10} + 5x^8$$

$$g(x) = -14x^7 + 9x^5$$

The polynomial $p(x)$ is defined as the product of the given polynomials, $f(x)$ and $g(x)$. What is the coefficient of x^{15} in $p(x)$?

- A. 108
- B. 38
- C. 21
- D. 70

12 SAT Math

A researcher surveyed a random sample of 1,243 people from a certain state to estimate the percentage of people who support the governor's recent approval of a bill. From the survey, the researcher estimated that 69% of people from the state support the governor's approval of the bill, with an associated margin of error of 2.57%. The researcher repeated the survey with a random sample of people from the state that was double the original sample size. Assuming the margins of error were calculated in the same way, which of the following is true about the margin of error associated with the estimate from the larger sample?

- A. The margin of error is between 2.57% and 3.57%.
- B. The margin of error is greater than 5.57%.
- C. The margin of error is between 4.57% and 5.57%.
- D. The margin of error is less than 2.57%.

13 SAT Math

In the figure shown, the measure of angle X is 55° . The length of XY is 28 units and the length of XZ is 19 units. What is the area, in square units, of triangle XYZ?

Note: Figure not drawn to scale.

- A. $532 \sin 55^\circ$
- B. $266 \sin 55^\circ$
- C. 266
- D. 532

14 SAT Math

$$y = 3x^3 + 8$$

$$y = 363x + 8$$

A solution to the given system of equations is $(x, y) = (a, b)$, where a and b are constants. If $b \leq 0$, what is the value of a ?

15 SAT Math

$y < -4x$ $y \geq 45$ There are three points $(-12, n)$, where n is an integer, that are solutions to the given system of inequalities in the xy -plane. Which table represents these three points?

- A. $(-12, 45)$, $(-12, 46)$, $(-12, 48)$
- B. $(-12, 45)$, $(-12, 47)$, $(-12, 48)$
- C. $(-12, 45)$, $(-12, 46)$, $(-12, 47)$
- D. $(-12, 46)$, $(-12, 47)$, $(-12, 48)$

16 SAT Math

In right triangle ABC , angle C is the right angle and $BC = 17$. Point D lies on side AB and point E lies on side AC such that DE is parallel to BC and $CE = 2AE$. What is the length of DE ?

17 SAT Math

If $x = \sqrt[n]{2x^n + 35}$, where n is a positive integer constant, what is the value of x^n ?

- A. -17.5
- B. 7
- C. 5
- D. -5

18 SAT Math

$$5x + 4y = a$$

$$6x + 5y = b$$

In the given system of equations, a and b are constants. The graphs of these equations in the xy -plane intersect at the point $(x, 4)$. What is the value of $5b - 6a$?

- A. -4
- B. 10
- C. 4
- D. -5

19 SAT Math

A scientist initially measures 6,000 bacteria in a growth medium. 4 hours later, the scientist measures 12,000 bacteria. Assuming exponential growth, the formula $P = C2^{rt}$ gives the number of bacteria in the growth medium, where r and C are constants and P is the number of bacteria t hours after the initial measurement. What is the value of r ?

- A. 4
- B. $1/6,000$
- C. 6,000
- D. $1/4$

20 SAT Math

In the figure, AB , DE , and CF are parallel. If $202^\circ < x + y + z < 215^\circ$, which of the following could be a value of $w - y$?

- I. 23°
- II. 35°

- A. I only
- B. II only
- C. I and II
- D. Neither I nor II

Note: Figure not drawn to scale.

21 SAT Math

Spheres A and B have a point of tangency at point P, where segment MP is a diameter of sphere A, segment NP is a diameter of sphere B, and point P lies on segment MN. The radius of sphere A is 13 times the radius of sphere B, and the volume of sphere B is 288π cubic inches. What is the length, in inches, of segment MN?

Note: Figure not drawn to scale.

22 SAT Math

A rectangle is inscribed in a circle such that the diagonal of the rectangle is twice the length of the shortest side of the rectangle. The area of the rectangle is $961\sqrt{3}$ square units. What is the length, in units, of the radius of the circle?

1	A	1	C	1	C	1	D
2	A	2	D	2	B	2	1/3
